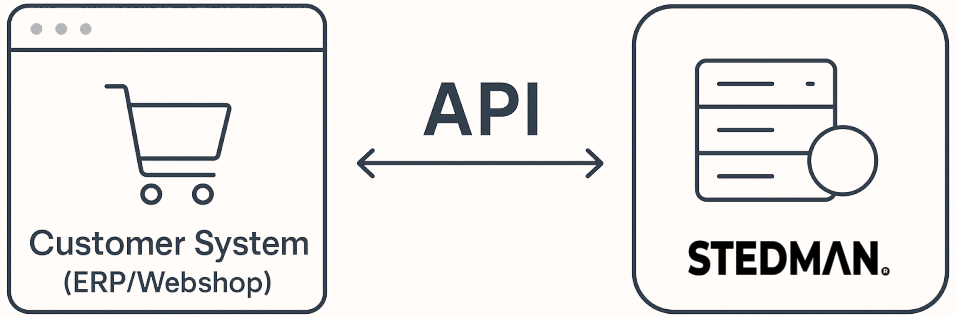
API PLATFORM

The smart way to integrate product, order, and stock data into your own systems



STEDMAN.

WHY API ?

- Fast Integration
- Real-Time Data
- Automation potential
- Many Endpoints

STEDMAN®

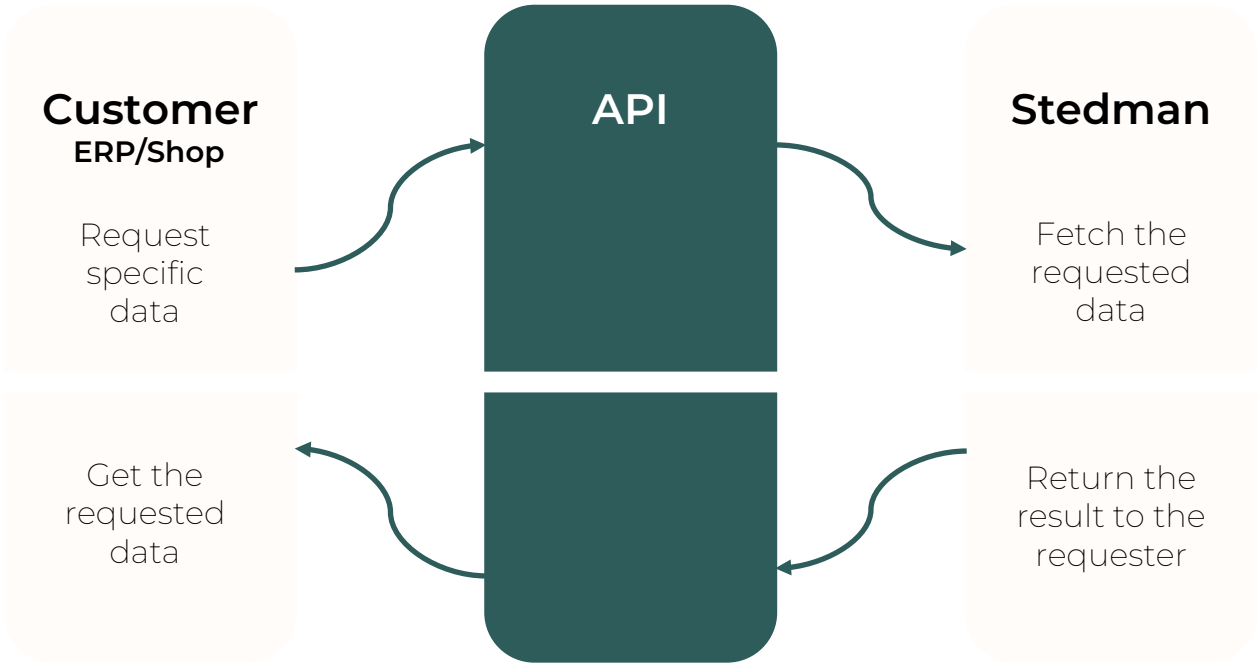
Key Benefits

Efficiency	Accuracy	Scalability	Flexibility	Partnership
Save time by automating product imports & orders.	Always up-to-date stock and product data	Connectable with ERP, Webshop and custom systems	Use only what you need	Designed for our partners & customers

How it works

You connect via REST-API using your personal API key.

The data flows securely and in real time.



Response time regulary less than 5 seconds!

The API is the “bridge” that receives the request, validates it, and forwards it to the Stedman system in the correct format. Then it also brings back the response in a standardized way (JSON)

Example Request / Response

HTTP

```
1 GET  /v1/stock/ST2000  HTTP/1.1
2 Host:  api.stedman.eu
3 Authorisation:  ******
```

Requests can be made using simple HTTP, PHP, Python, Java and other programming languages.

```
1 {
2     “product„: [
3             {
4             “ean“: “4043738479560“,
5             “stock“: 482
6             },
7             {
8             “ean“: “4043738034769“,
9             “stock“: 1450
10            },
11            ...
12    ]
13 }
```

STEDMAN®

Possibilities
